Concept of Passive Fire Protection and Its Applications

by

Mr Samson Ho

Promat

Abstract: Passive fire protection systems have been widely used in modern buildings and structures. Not too many people know how fast the fire spread is and what temperature a fire can reach in different conditions. How is a passive fire protection system tested? Are there any differences in testing various systems? In this presentation, real fire tests will be shown and also videos of fire spread and fire tests of unprotected systems will be illustrated. It is also important to understand the suitable use of different types of passive fire protection systems. A comprehensive range of systems application will be introduced.

Speaker: Samson Ho is the Regional General Manager of Promat International Asia Pacific Ltd. He has been working in the passive fire protection industry for more than 15 years and has extensive experience in providing passive fire protection solutions and carrying out fire tests. He is fully responsible for the fire protection market development of Hong Kong, Taiwan, Macau and the Mainland China. He has finished MBA course at the University of South Australia in addition to his study of Mechanical Engineering course at the Hong Kong Polytechnic. He is also a Committee Member of the Fire Group.
